	Urgent	Not Urgent
Important	Do - (Your MVP) ● Scan a target directory recursively for specified file patterns like .log and .class ● Safe dry run mode to preview matching files and total disk space before any deletion. ● Automated cleanup based on file age thresholds like files older than 5 days.	Schedule - (For V2.0+) ● Compression mode to archive old logs into .tar.gz before deleting those. ● Configurable exclusion patterns like ignoring .git/ or specific subdirectories. ● Disk space recovery summary is written to a formatted summary file.
Not Important	Delegate - (Use a library) ● File searching and pattern matching logic, uses standard find command. ● Disk space and file size calculation, use system du and awk utilities. ● Background execution scheduling, use system cron.	Delete - (Cut it) ● Graphical file tree viewer or desktop GUI. ● System-wide disk defragmentation integration. ● Automatic cloud storage upload for purged files.
